

Enarpee Services has joined forces with eTX to create a new regulatory services company, Monitoring and Compliance Partners Ltd (MCP) and launch three key market support services:

- **GoVerifyit (robust verification of consumer opt-in)**
- **VeriAudits (automated testing & monitoring)**
- **VeriScanner (affiliate tracking & recording)**

MCP will supply a full suite of regulatory services, serving international markets, where both companies are already active and growing their reach. Commenting on their new entity '**Monitoring and Compliance Partners' (MCP)**, Declan Pettit, eTX Managing Director said: "Enarpee Services have years of experience in these markets and have built up not only a fine reputation, but also a network of International connections that we can tap into. Additionally, their collaborative approach to consultative services acts as a perfect complement to our technically focused solutions'. Neil Penny, MD of Enarpee Services added: "We have known eTX for years and are aware that they have a stable of well recognised, scalable applications to cater for the regulatory needs of the industry - used by European Regulators, Technical Aggregators and Marketing Companies. **GoVerifyit** (their updated 'bolt-on' version where merchants are live in 24hrs) and their **VeriAudits** offer in particular, have a wide appeal and traction with the PRS market already."

MCP has recently added a new product called **VeriScanner**, that scans sites leading to merchant sites and identifies changes to assess for regulatory compliance.

MCP regulatory services are not limited to the Telecommunications Sector and PRS Industry, but also to other payment sectors. MCP's first major contract was signed in July with **First Data Corporation**, a provider of electronic payment solutions and estimated to be one of the world's largest organisations. MCP provides monitoring services of **First Data's** new merchants.

Editors Notes

Formed in 1997 by brothers Declan and Brian Pettit, **eTX's** core offering is the 'Touchpoint' Application Development platform, a hardware/software system that intelligently manages information/events in a real-time environment. This platform comprises proprietary technology which is the result of fifteen years research and development, and which is particularly suited to fast-moving environments.

Enarpee Services are the world experts in Regulatory Advice, Due Diligence, Compliance and Product & Service Audits for companies utilising Premium Billed mechanisms in support of their services to Consumers. Run by Neil Penny and Toby Padgham, currently Enarpee Services are the appointed Regulatory & Compliance partner for the UK's largest Mobile Network Operator, **EE** (which also incorporates the T-Mobile & Orange Mobile Network brands).
